FISH & WILDLIFE SERVICE

UNITED STATES DEPARTMENT OF THE INTERIOR
FISH AND WILDLIFE SERVICE
BUREAU OF SPORT FISHERIES AND WILDLIFE
RESEARCH REPORT 68

RESEARCH REPORTS

This series of reports was begun when the Fish and Wildlife Service was established in 1941; the series superseded Wildlife Research Bulletins of the Bureau of Biological Survey and Investigational Reports of the Bureau of Fisheries, those two Bureaus having merged to form the Service. The Research Reports are being continued (with Research Report 54) in a slightly changed format, as the research-reporting series of the Bureau of Sport Fisheries and Wildlife (U.S. Fish and Wildlife Service), comprising reports of scientific investigations related to the work of the Bureau. The Bureau distributes these reports without charge to official agencies, to libraries, and to researchers in fields related to the Bureau's work; additional copies may usually be purchased from the Division of Public Documents, U.S. Government Printing Office.

Current Research Reports are—

54. Fluctuations in Age Composition and Growth Rate of Cutthroat Trout in Yellowstone Lake, by Ross B. Bulkley. 1961. 31 p.
55. Mortality Studies on Cutthroat Trout in Yellowstone Lake, by Orville P. Ball and Oliver B. Cope. 1961. 62 p.
56. Limnology of Yellowstone Lake in Relation to the Cutthroat Trout, by Norman G. Benson. 1961. 33 p.
57. Chemical Composition of Blood of Smallmouth Bass, by Eddie Wayne Shell. 1961. 36 p.
58. Chronic Effects of Endrin on Bluntnose Minnows and Guppies, by Donald Irvin Mount. 1962. 38 p.
59. Predicting Year-Class Abundance of Yellowstone Lake Cutthroat Trout, by Ross V. Bulkley and Norman G. Benson. 1962. 21 p.
60. Limnological Organic Analyses by Quantitative Dichromate Oxidation, by John A. Maciolek. 1962. 61 p.
61. Bioassay and Use of Pituitary Materials to Spawn Warm-Water Fishes, by Howard P. Clemens and Kermit E. Sneed. 1962. 30 p.
62. Equilibrium Yield and Management of Cutthroat Trout in Yellowstone Lake, by Norman G. Benson and Ross V. Bulkley. 1963. 44 p.
63. Sea-Water Systems for Experimental Aquariums; A Collection of Papers, edited by John R. Clark and Roberta Clark. 1963. 190 p.
64. Some Chronic Effects of DDT on Cutthroat Trout, by Don Allison, Burton J. Kallman, Oliver B. Cope, and Charles Van Valin. 1963. 30 p.
65. Revised Bibliography on the Cutthroat Trout, by Oliver B. Cope. 1964. 43 p.
66. Effects of Accumulated Excretory Products on Hatchery-Reared Salmonids, by Roger E. Burrows. 1964. 12 p.
67. A Device for Stamina Measurement of Fingerling Salmonids, by Allan E. Thomas, Roger E. Burrows, and Harry H. Chenoweth. 1964. 15 p.
68. Bibliography on Reservoir Fishery Biology in North America, by Robert M. Jenkins. 1965. 57 p.

ABSTRACT

This bibliography on reservoir fishery biology comprises 1,210 references under 14 general subject headings. Within subject categories, citations are arranged alphabetically by authors, without cross-indexing or multiple listing. Subject headings are age and growth, bibliographies, diseases and parasites, food habits, harvest rates, life history and ecology, biological limnology, physicochemical limnology, management technique evaluation, methodology and technique development, population dynamics, summaries of management and research, comprehensive or general fishery surveys, and systematics and distribution. The references include many graduate theses and dissertations, mimeographed State fishery agency administrative reports, and Federal Aid (D-J) job completion reports concerning reservoirs.

BIBLIOGRAPHY ON RESERVOIR FISHERY BIOLOGY IN NORTH AMERICA

By Robert M. Jenkins, *Fishery Research Biologist*

National Reservoir Research Program, Fayetteville, Arkansas
Bureau of Sport Fisheries and Wildlife

Accelerated activity in reservoir fishery research has inspired a number of literature surveys and reviews by biologists in the last decade prior to embarking on new fact-finding efforts. At the request of the Reservoir Committee, Southern Division, American Fisheries Society, the Sport Fishing Institute undertook a consolidation of existing reservoir bibliographies and a thorough search for pertinent American literature through 1962. Bibliographies compiled by Beckman and Kutkuhn (1953) and Pfitzer (1959) were utilized.

Location of additional references and preparation of the bibliography for publication have been completed by the National Reservoir Research Program, Bureau of Sport Fisheries and Wildlife. In the final compilation, State fishery agencies were requested to submit references on large impoundments, including mimeographed administrative reports and Dingell-Johnson project completion reports. A few outstanding papers on small impoundments were included, as findings and hypotheses presented therein provide much of the existing theory on large reservoir fish population dynamics.

Under 14 subject headings, 1,210 references on reservoir research and management are presented here. Citations of foreign papers are excluded because they are not generally available in translated form

(abstracts of current European, Japanese, and Russian work on reservoirs now appear in *Sport Fishery Abstracts*). References on fish passage at high dams are omitted, but papers on reservoir tailwaters and preimpoundment conditions are included.

Considering the millions of acres of impounded water and their increasing importance in the total United States sport fish resource, it is surprising that more pertinent scientific papers and reports were not found. This paucity of papers is a clue to the relative neglect of reservoir fishery problems, and emphasizes the need for the intensified research now being undertaken.

Extensive reservoir investigations completed by many State fish conservation agencies under Federal Aid in Fish Restoration (Dingell-Johnson) programs, or under regular State-funded programs, are not properly represented in this compilation of references, owing to the inaccessibility of reports to most fishery workers and to the tentative nature of some of the findings. Earlier Dingell-Johnson reports were often filed in manuscript form, or, if processed, were not widely distributed. Some of them present only raw data or brief accounts of progress on reservoir studies, but a large number of existing completion reports contain valuable infor-

mation which should be available beyond State boundaries. Those forwarded to me upon request by the Division of Federal Aid, Bureau of Sport Fisheries and Wildlife, have been included in this bibliography. A large number of the more recent processed completion reports listed are available from State fishery agencies, but findings may not be quoted without permission of the authors.

The references are compiled, alphabetically by authors, under general subject headings, without cross indexing or multiple listing. Because many of the papers cover broad, overlapping areas, related subjects should be checked when searching for pertinent references on a particular topic. For instance, some age and growth information may be found in works listed under Food Habits, Harvest Rates, Life History and Ecology, Management Technique Evaluation, Population Dynamics, and Comprehensive and General Fishery Surveys.

Authors' names are given as they appear in the paper cited or in the list from which the reference was taken. Consequently an author's name may appear in more than one form—with initials only, or with full name.

This cataloging of authors and titles should help reduce duplication of effort by researchers, spur formal publication of findings for use of all workers in the field, and aid in communication among fishery scientists.

AGE AND GROWTH

BASS, J. CARL, and CARL D. RIGGS.

1959. Age and growth of the river carpsucker, *Carpiodes carpio* Rafinesque, of Lake Texoma. Proceedings of the Oklahoma Academy of Science, vol. 39, p. 50-69.

UNITED STATES
DEPARTMENT OF THE INTERIOR
FISH AND WILDLIFE SERVICE
BUREAU OF SPORT FISHERIES AND WILDLIFE
WASHINGTON, D.C. 20240

The Department of the Interior, created in 1849, is a Department of Conservation, concerned with management, conservation, and development of the Nation's water, wildlife, fish, mineral, forest, and park and recreational resources. It has major responsibilities also for Indian and Territorial affairs.

As America's principal conservation agency, the Department works to assure that nonrenewable resources are developed and used wisely, that park and recreational resources are conserved for the future, and that renewable resources make their full contribution to the progress, prosperity, and security of the United States, now and in the future.
